

1. RISK OF SUFFOCATION! THIS MASK MUST NOT BE WORN WHILST ASLEEP!

2. CHILDREN WEARING A MASK MUST BE KEPT UNDER CLOSE AND CONSTANT ADULT SUPERVISION!

Additionally - Kids may not Run or Play wearing this mask as it will dislocate, also, heavy breathing increases under-pressure inside the mask, which may cause air to get drawn in from around the edges and over the nose, instead of being filtered through the fabric.

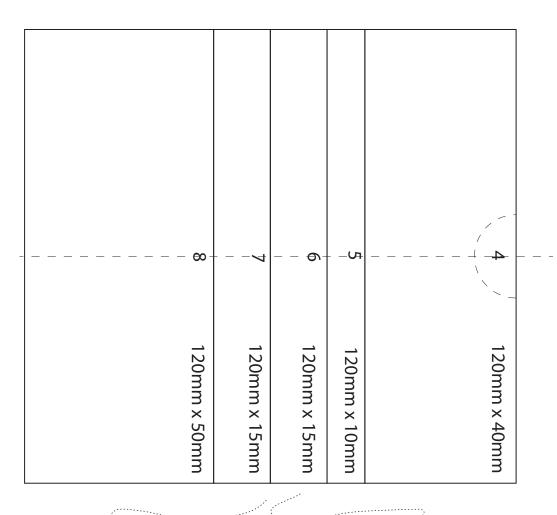

This mask will have VERY limited effect, and may cause more damage than good (by giving a false sense of being protected), if not used correctly.

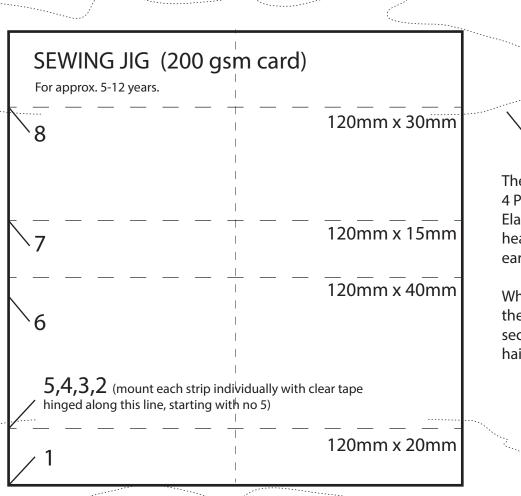

Despite being young, the wearer must be told to avoid touching their face and mask. Kids must NOT attempt to put on or remove a mask themselves, whithout first having cleaned their hands.

A mask will have little to no positive effect if Distance is not assured and hands are not kept clean..

On the other hand. This mask may prove beneficial where kids gather, on public transport, in a class rooms etc. Wearing a mask, any mask, may not protect the wearer sufficiently, but it will indirectly protect those around by catching droplets in exhaled air. Therefore - it will be effective if every individual in a group wears a mask. Incl the kids.

Anyone producing this mask has a responsibility to convey this message - and make sure it is understood.

The elastic. 25cm lenghts. 4 PCS needed per mask.. Elastic is worn around the head, NOT around the ears as for adults.

When worn: To prevent the mask from dislocating, secure the elastics with hair clips?

Material cutting template For approx. 5-12 years.	150mm x 170mm
NB If using a vacuum bags as your filter material - Place the fabric in the Jig with the Bag inside facing down. le. the Bag Outside becomes the Mask Inside.	

Length of metal strip/wire 90 mm
